

# CITIZENS SUMMARY

## Findings in the Cyber Aware School Audit of the Cape Girardeau Public School District

Background	<p>The Cape Girardeau Public School District's Student Data Governance Audit was completed as part of the Cyber Aware School Audits Initiative. These audits are designed to assess the effectiveness of privacy and security controls with a focus on identifying practices to improve the security of information school districts have on students and their families. The district uses a student information system (SIS) to maintain student data and to track and monitor academic progress. The SIS maintains private and confidential data, such as social security numbers and assessment test scores. Additional systems and applications that maintain data are used for administrative functions and to enhance student productivity and classroom collaboration. The district relies extensively on computerized systems to support its educational and mission-related operations and on information security controls to protect the sensitive data residing on those systems. Auditors identified areas where improvements are needed but also found the district has developed certain controls to establish a safe environment for using technology, including promoting online safety, security, and confidentiality.</p>
Data Governance	<p>The district has not established a comprehensive data governance program, a critical task for any educational organization. A comprehensive program is necessary to ensure the confidentiality, integrity, availability, and quality of data. Without a formal program, the district cannot ensure that personally identifiable information (PII) is adequately protected and safe from unauthorized access, misuse, or inadvertent disclosure.</p>
User Accounts	<p>The district has not fully established controls for maintaining user accounts for accessing system resources. The district has documented procedures in place to notify information technology staff of a user's departure. However, the procedures are not consistently applied to users who are not technically considered district employees. Auditors found four former users still had access to district systems 30 days or more after leaving the district. In addition, the district does not proactively monitor for student information system user accounts that have not been accessed or used for a specified period of time. The district also does not perform periodic reviews of users' access to data to ensure access remains appropriate and aligned with job duties.</p>
Security Controls	<p>The district has not implemented necessary security controls, leaving technology assets, including PII, at risk of inappropriate access, use, and disclosure. The district has not formally appointed any specific personnel to serve as security administrator or formally assigned responsibility for creating, implementing, and maintaining security policies and procedures. Without documented and approved policies and procedures, management lacks assurance that security controls are appropriate and properly applied.</p>
Incident Response and Continuity Planning	<p>The district has not taken all necessary measures to protect data in the event of a breach or other disruptive incident. The district has not formally documented policies and procedures for responding to security incidents, has not adopted a formal data breach response policy, and has not completed</p>

the process of developing and testing a continuity plan. Without comprehensive incident response and breach-related policies, management may not be sufficiently equipped to respond quickly and effectively to an incident or breach, increasing the risk of potential harm to the district or affected individuals. Without a tested and functional continuity plan, management has limited assurance the organization's business functions and computer processing can be sustained during or promptly resumed after a disruptive incident.

---

#### Vendor Controls

The district has not established a process for ensuring software acquired or outsourced from information technology vendors complies with data security principles. Additionally, the district does not have a written contract with the vendor of a critical district system. Without an effective process for monitoring and managing risk of software acquisition or outsourcing, the district has less assurance in a vendor's ability to deliver services effectively, securely, and reliably and to ensure that services meet current and future data privacy and security needs.

Because of the nature of this report, no overall rating is provided.
